AREA OF CONCENTRATION AND ELECTIVES COURSES

The data included in this report reflects courses taken toward 50 plans of study as identified by MS URPL graduates from fall 2017 to summer 2021.

The concentrations were coded based on the courses students took, their internships, and final projects. Consideration was taken into how students described their own concentration, but in some cases, students took courses across housing, urban design, land use, transportation, and other fields without focusing only within one, and their internships and final projects did not narrow their focus into a clear specialization. To describe these cases, a new category was developed: the skilled generalist.

One might ask if being a generalist counts as a specialization. In planning, according to the AICP, planners can be certified with backgrounds as generalists or specialists. Therefore, because this category describes the data and is consistent with existing professional practices, it was adopted for this exercise. Students should talk about this with their advisors, if it raises any concerns.

Courses identified include:

- one, three-credit course that satisfies the Structure and Function of Cities and Regions, an URPL CORE requirement
- 12 credits toward an **area of concentration**, an area of planning where the student develops in-depth skills and knowledge
- 12 credits of **elective** courses of interest to the student (300-level or higher to be counted for graduate credit)
